The beauty of comprehensive care

Motivated by a desire to remain on the leading edge, Dr. Pozner partners with a talented team that is dedicated to well-being, beauty and anti-aging. Such a synergistic “stay young” strategy enables patients to comprehensively address their aesthetic concerns—whether they relate to weight-loss, preventive medicine, nutrition, dermatology, cosmetic enhancement, age management or all of the above. More specifically, he routinely refers patients to colleagues within his practice for adjunct treatments to optimize service. “Our skilled professionals personalize care to comprehensively attend to patients’ individual needs,” says Dr. Pozner. “Our office participates in many FDA studies and offers innovations rapidly, so a separate center just made sense.” Always on the forefront of innovation, Dr. Pozner is excited to now offer patients Zeltiq™ and Ultherapy™, and looks forward to providing new technology as it becomes available in years to come.

CASE STUDY

REFINEMENT THROUGH REVISION

Dr. Pozner is frequently sought out by patients to perform revision procedures, like he was on this particular case. “This 22-year-old patient was not happy with her first breast augmentation. We were able to give her the results she should have achieved the first time, performing silicone breast re-augmentation surgery. She is now very happy with the size, texture and overall shape of her breasts.”
